Actual rendering and editability

The DOCX retains the requested font names. They are not installed in this rendering environment; the PDF uses Noto Serif, Noto Serif CJK TC, Liberation Serif and Noto Sans CJK TC. The Chinese masthead is a fallback specimen, not a Source Han Serif font verification.

The outlined TMFD wordmark starts from Noto Serif Display letterforms, with a redrawn M and revised spacing. The logo is a scalable vector object; the remaining text is editable in the DOCX. This is one proposal in two languages, not an approved identity.
